# What is IPTV ?

Is a system through which internet television services are delivered using the architecture and networking methods of the Internet Protocol (IP ) suite.

May be classified as

- Live television
- Time Shifted programming
- Video - On – Demand (VOD)

# A More Detailed Definition

"IPTV is defined as ***the secure and reliable delivery*** to subscribers of entertainment video and related services. These services may include, for example, Live TV, Video On Demand (VOD) and Interactive TV (iTV). These services are delivered across an access agnostic, ***packet switched network that employs the IP protocol to transport the audio, video and control signals***. In contrast to video over the public Internet, with IPTV deployments, ***network security and performance are tightly managed*** to ensure a superior entertainment experience, resulting in a compelling business environment for content providers, advertisers and customers alike.]

1. What is IPTV?

From Search

IPTV today is much, much more than just video-on-demand. It is more than a pay-TV service from a telephone company. Today the IP-based industry embraces almost every aspect of television, from content capture through editing and archiving, and all with the intent of supplying
